

SENSATIONS IN CONGRESS

❖ The Recently Repudiated Allen of
 ❖ Nebraska Attacked Sampson.

❖ LENTZ ALSO CAUSED UPROAR

Western House Members Made Ineffectual Effort to Accept Senate Amendment on Irrigation.

Washington, Feb. 26.—An important plea to the committee to withdraw

amendment to the Philippine amendment to the army appropriation bill was agreed to in the senate today. It was an amplification of the amendment previously offered by Mr. Hoar, laying restrictions upon the sale of public lands, the granting of franchises and concessions of mines. It was accepted by the committee in charge of the measure and is now a part of the committee amendment.

Mr. Morgan of Alabama continued his speech until 12 o'clock, and occupied the hour during the greater part of the day. He concluded his address just before the afternoon recess, having discussed comprehensively both the Philippines and Cuban amendments. He ap-

both propositions, maintaining that the government should not be troubled with ground and tritling with edged tools in acting upon them without ample consideration.

During the afternoon Mr. Allen obtained leave of absence from Mr. Morgan and severely arraigned Rear Admiral Sampson for some indorsements he is alleged to have made upon an application for the promotion of Mr. Morgan to the navy, for promotion to the grade of admiral. Mr. Allen's denunciation of Admiral Sampson was sensational.

During the day the conference reported upon the District of Columbia appropriation bill was agreed to, as was also a partial report of the conferees on the post office appropriation bill.

THIRTY-TWO LIVES LOST IN WYOMING MINE FIRE

Salt Lake City, Feb. 26.—A special to mines and the still later one in Bellevue

READY to print, had been withheld from the Record, and he had turned over to General Grosvenor, of Ohio, by the bill was beaten on account of the item repeating assistant chiefs of bureaus in the navy department.

THIRTY-TWO LIVES LOST IN WYOMING MINE FIRE

Salt Lake City, Feb. 26.—A special to the Tribune from Kemmer, Wyo., dated at 9:45 a. m. says:

The situation at Diamondville mine No. 1 is unchanged this morning.

A local official of the Diamondville coal and coke company made the following statement this afternoon:

"The foreman of the mine, George N. mines and the still later one in British Columbia, it is still sufficient to impress itself. The large proportion of men of families among the victims added to the general distress and all night long women and children hung around the slope, filling the air with their lamentations for their lost husbands and fathers. Very few of the band of men removed by the explosion were recovered."

Griffin, was notified that fire had started between rooms 45 and 46 in the hotel's east wing. Thomas Simpson, who lives in room 45, said he was about 5,200 feet from the main slope. At 3,000 feet from the main slope there is a small canyon. Griffin said he saw the track two drivers ahead the loaded cars preparatory to taking them to the slope. The outside driver who was in the lead trip was on the left side track the drivers use a small pipe

Griffin, was notified that fire had started between rooms 45 and 46 in the south wing. The story is about 5,200 feet from the main slope, and 750 feet from the main slope there is a side track. On the inside of this side track two drivers rather the loaded trucks were waiting for them to go up the slope by the outside driver who hauls the trip by a spike team. At this side track the drivers use a small piece of brattice 10 ounce duck as a wind break. This was blown away by the winds some years yet unknown this brattice was ignited, it is believed by a driver's lamp.

Near to this brattice was a board walk between the main and back entry which also caught fire, causing a large flame which was fed by coal falling from the roofs and ribs, soon becoming an immense fire. Meantime

terfering friends.

An additional tragedy followed the main one today. Thomas Simpson, who has been a member of the night's mine, came to Diamondville from Alabama but six weeks ago, bringing his wife and mother in the hope that the change of climate would benefit her. He had a whole lot of night's work, was too great for Mrs. Simpson's delicate health and today she died. Thus every member of the family is now in the hospital. There are many other distressed individuals who are weakened, but none more pathetic.

The origin of the fire has not been definitely determined, but it is thought it may have been caused by some one in the driver's cabin back on the sixth level. At this point the drivers congregate while waiting for their loads, and it is thought a lighted wick

inside of the fire so that the smoke was carried towards them. One practical helper, Chas. J. O'Connell, who worked in the fire engine end of the entry, finished his day's work of untrussing and traveling toward the main slope on his way to the engine house. He was seen traveling towards him with the air current. Seeing that it was impossible to get to the engine house by the air current and kept in advance of the fire. The fire was discovered by Dr. James Hudson, and he states that had he not been lost the lives would have been saved. The fire was English speaking much lower, for he gave the alarm thoroughly and was severely injured. He was unable to communicate the danger to the unfortunate. He was himself rescued with the aid of the fire engine and placed in the doctor's care. The failure of Slippson

inside of the fire so that the smoke was carried towards them. One practical miner, Charles Mahan, who worked at the extreme end of the mine, had a rope in his hand. While he was running toward the main slope on his way home he encountered dense smoke traveling towards him with the air current. He immediately turned back to face the smoke he retreated with the current and kept in advance of the smoke and called to all the miners in that district to flee as there was a fire in the lower levels. The miners were able to act upon this warning and were suffocated.

Thirty-two lives are lost, of which twenty are men. It is given out by Superintendent Thomas Sneddon and confirmed by others familiar with the mine.

The fire was discovered by Dr. James Hudson, and he states that the miners who lost their lives began to asphyxiate, the death list would have been much longer had not the alarm thoroughly and was severely burned himself in his efforts to communicate the danger to the unfortunate miners. The fire is now under great difficulty and is now under doctor's care. The failure of Simpson and his son and Dwyer to respond to the summons is accounted for by their being so far distant to hear Hudson's voice.

Shortly after the breaking out of the fire Superintendent Sneddon arrived. An examination proved to him the mine was full of smoke and that the men in the heavy flames and gas were

the conditions that the lives of all the men in the mine would be saved in three minutes of the fire gaining the ascendancy.

At this writing, 6 o'clock, the first blast of the fire extinguished, and at 6:15 it is fully under control, and Superintendent Sneddon announces that the mine will be ready tomorrow for the recovery of the bodies.

Ghostly preparations are now under way to remove the bodies of the men who were killed in the explosion.

A second attempt at rescue was made but without avail, and when the hope of saving the men was abandoned, the parent, Superintendent Sneddon gave orders to close the level. This was done at 6:30, and the fire was under control. The fire was brought fully under control and every opening being hermetically sealed off.

The prompt action of Superintendent Sneddon in closing the mine and thus

the conditions that the lives of all the men were certainly extinguished within three minutes of the fire gaining the ascendancy.

At this writing, 6 o'clock, the fire is believed to be extinguished; at any rate it is fully under control, and Superintendent Sneddon announces that he will open the mine tomorrow for the recovery of the bodies.

Glacially preparations are now under way for the reception of the bodies, the blacksmith shop having been prepared as a temporary morgue.

While the horror is of less proportions than the disaster at the Scofield

A second attempt at rescue was made but without avail, and when the hopelessness of saving any lives became apparent, Superintendent Sneddon gave orders to close the level. This was done at once, with the result that the fire was brought fully under control, every opening being hermetically sealed.

The prompt action of Superintendent Sneddon in closing the mine and thus confining the fire and ultimately extinguishing it has prevented a vast property loss, and will make it possible for the company to resume operations without much loss of time.

While the horror is of less proportion than the disaster at the Scofield

A second attempt at rescue was made but without avail, and when the hopelessness of saving any lives became apparent, Superintendent Sneddon gave orders to close the level. This was done at once, with the result that the men were left to their fate, and every opening being hermetically sealed.

The prompt action of Superintendent Sneddon in closing the mine and thus confining the fire and ultimately extinguishing it has prevented a vast property loss, and will make it possible for the company to resume operations without much loss of time.

CUBAN RELATIONS WITH THE UNITED STATES

Havana, Feb. 26.—In the constitutional convention today, discussing relations with the United States, General Gomez declared:

"I, the Americans were to withdraw today I would go with them."

General Gomez said he recognized the fact that the United States was responsible for the establishment of a self-government. The general also said not withdraw until such a condition was brought about. The work of handing over the reins of government to the new republic was an undaring and a loving much time and labor and a large amount of study and experience on the part of Cubans in the work of self-government. The general also said the element in control of the municipalities was not working in the interest of the island. The officials were inexperienced and could not handle the

The coming municipal elections would pave the way for the elections to be held under the electoral law being drawn up by the constitution.

Gen. Gomez had no objection to the outline of the future relations between the United States and Cuba as recommended by the committee of the United States. He thought, however, that it would be better for the United States to base land for naval stations instead of purchasing outright.

After a discussion of several hours the convention adopted one article defining the proposed relations, namely that Cuba would not make treaties with any other country without allow the sovereignty of the republic or allow the island to be made a base of war operations against the United States or any other country. The last four words "or any other country" were

the conditions that the lives of all the men were certainly extinguished within three minutes of the fire gaining the ascendancy.

At this writing, 6 o'clock, the fire is being held in check, but the rate it is fully under control, and Superintendent Sneddon announces that he will open the mine tomorrow for the recovery of the bodies.

Ghostly preparations are now under way for the reception of the bodies, the blacksmith shop having been prepared as a temporary morgue.

While the horror is of less proportion than the disaster at the Scofield

A second attempt at rescue was made but without avail, and when the hopeless loss of the miners' lives became apparent, Superintendent Sneddon gave orders to close the level. This was done at once, with the result that the men were buried in a mass of rock every opening being hermetically sealed.

The prompt action of Superintendent Sneddon in closing the mine and thus confining the fire and ultimately extinguishing it has prevented a vast loss of life, and has rendered it possible for the company to resume operations without much loss of time.

CUBAN RELATIONS WITH THE UNITED STATES

Havana, Feb. 26.—In the constitutional convention today, discussing relations with the United States, General Gomez declared:

"If the Americans were to withdraw today I would go with them."

General Gomez said he recognized the fact that the United States was responsible for the establishment of a stable government in Cuba and could not withdraw until such a condition was reached. The work of handing over the reins of government to the new republic was an undertaking involving heavy means labor, and a large amount of study and experience on the part of Cubans in the work of self-government. The general also said the element in control of the municipalities was not working in the interest of the island. The officials were inexperienced and could not be given a free hand. It meant the destruction and ruination of the island.

Gen. Wood said the greatest difficulty experienced was in getting the congressional element to support the municipal government. His purpose was to bring the best element to the front.

The coming municipal elections would put the heavy burden of responsibility on the shoulders of the men elected under the electoral law being drawn up by the convention.

Gen. Gomez had no objection to the outline of the future relations between the United States and Cuba as recommended by the senate of the United States. He thought, however, that it was not better for the United States to lease land for naval stations instead of purchasing outright.

After a discussion of several hours, the outline of the future relations defining the proposed relations, namely, that Cuba would not make treaties with any country which would endanger the independence of the United States, allow the island to be made a base for war operations against the United States or any other country. The last four words "or any other country" were added after a warm debate. The advocates of this clause maintained that Cuba should remain neutral as was carried on in the island and would only receive the benefits of the United States interests which had already suffered greatly and had not yet fully recovered

in the indictment is "Salisbury," which is wrong and renders the indictment invalid.

Mr. Dineen would not deny or affirm the statement that the grand jury will be asked to vote a new true bill on Monday.

SHIP WRECKED WITHIN SIGHT OF HOME PORT

Steamer from Hong-kong Sank Near the Golden Gate ---Over 125 Persons Drowned---Consul Wildman and Family Are Among the Missing ---Son of Capt. Coghlan Rescued.

Special to the Gazette.
Denver, February 22.—(Graham Coghlan, son of Capt. Coghlan, who is at present visiting friends in this city, is the second officer of the steamer Rio de Janeiro, which was wrecked just outside the Golden Gate at San Francisco this morning.

The news of the accident caused a panic among the passengers. The steamer was carrying 125 passengers and a crew of 100. The ship was wrecked near the Golden Gate at San Francisco this morning.

Sad Condition of Neglected Children

The time of the county court was consumed almost entirely yesterday with the hearing of the case of the children of Mr. and Mrs. Wesley W. McHenry committed to the State House for Dependent and Neglected Children. The trial brought out a sad state of affairs. It appears that McHenry married his wife when she was but 15 years of age and that she at the time possessed a considerable amount of property. It also appears that he persuaded her to sell that property and then appropriated it all but about \$20 to his own use. He then took up life in a covered wagon and has been carrying on such a life ever since while she has for some time been keeping roomers and doing nothing to support herself and her three little girls, the oldest of whom is under 16 and the youngest quite a baby.

The court decided that her late reform was not sufficient to justify the refusal of the court to take the children and Judge Hubbard ordered that the three girls be committed to the State House for Dependent and Neglected Children. In view of the fact that McHenry professed her determination to lead a better life and do better by her girls, Judge Hubbard suspended sentence in order to give her time to reform. However, it was reserved the right to take her children from her and would do so without mercy for her if she did not.

Mr. and Mrs. Woodworth. Denver, Feb. 22.—Mr. and Mrs. William A. Woodworth, of Denver, who are mentioned as among the missing passengers of the wrecked Rio de Janeiro, left here in January last for a visit to Honolulu, and were returning home on the Rio.

COAL STRIKE COMMITTEE PRESENTED ITS REPORT

Special to the Gazette.

Denver, Feb. 25.—The coal strike committee has prepared its report and it has been submitted to the senate. The report is very lengthy, covering the work of the committee completely, citing the causes that led up to the strike and ending with a number of recommendations to be assembled.

The report recites at length the different visits of the committee to the several coal camps in the state, and also records their sessions in Denver. The report covers the situation in the different coal fields, the different grades of coal, the number of men employed, ownership of property, influence of the railroads, the causes leading up to the strike, including wages earned, cost of producing coal, profits of producer, profits of dealer, ventilation and taxation of mines, demands of miners, etc.

The report shows that the first meeting of the strikers in the northern coal fields was not called by any union or organization of any kind, but was a spontaneous gathering of the men from over the district. The men's grievances were insufficient wages, bad air and the company stores. The report states that the strike was only the culmination of a feeling of dissatisfaction among the miners. The report gives a history of the miners since 1888. It shows that the difference between the price received by the miners for mining the coal and the price the consumer is compelled to pay.

The report makes the following recommendation: First—The passage of the eight-hour constitutional amendment law.

Second—The passage of the anti-screen law.

Third—The passage of senate bill No. 300 in regard to mine ventilation.

Fourth—The passage of senate bill No. 315 regarding the manner of weighing coal.

Fifth—The passage of senate bill No. 300 in regard to the regulation of the coal trade.

Sixth—The passage of senate bill No. 315 regarding the manner of weighing coal.

Seventh—The enactment of legislation to prevent the crossing of competing lines of railroads within the state.

Eighth—The abolition of the scrip.

Ninth—The strict enforcement of

SENSATIONS IN CONGRESS

The Recently Repudiated Allen o Nebraska Attacked Sampson.

LENTZ ALSO CAUSED UPROAR

Western House Members Made Ineffectual Effort to Accept Senate Amendment on Irrigation.

Washington, Feb. 28.—An important amendment to the Philippine amendment to the army appropriation bill was agreed to in the senate today. It was an amendment of the amendment previously offered by Mr. Allen laying restrictions upon the sale of the public lands and the granting of franchises and concessions in the Philippines. It was accepted by the committee in charge of the measure and is now a part of the committee amendment.

Mr. Morgan of Alabama continued his speech began yesterday and occupied the floor until the greater part of the day. He concluded his address just before the afternoon recess, having discussed comprehensively both the Philippines and Cuban amendments. He ap

pealed to the committee to withdraw both propositions, maintaining that congress was treading on dangerous ground and trifling with edged tools acting upon them without ample consideration.

During the afternoon Mr. Allen retained the floor from Mr. Morgan and severely arraigned Rear Admiral Sampson for some statements he had alleged to have made upon a proposition of Chief Gunner Charles Morgan of the navy, for promotion to the grade of Rear Admiral. The denunciation of Admiral Sampson was sensational.

During the day the conference report upon the District of Columbia appropriation bill was agreed to, as was a partial report of the conference on the post office appropriation bill.

THIRTY-TWO LIVES LOST IN WYOMING MINE FIRE

started between rooms 40 and 48 in the rear of the building, and it is estimated that 6,000 feet from the main slope. At 3,000 feet from the main slope there is a side track. On the inside of this side track, the fire department had placed cars preparatory to taking them to the slope by the outside driver who hauls the trip by a spike tuck. At this point, the fire department had a car of brattice 10 ounce duck as a wind break while they waited for the cars. As some meant yet unknown this brattice was blown off, it is believed by the driver's lamp.

"Near to this brattice was a board dropping over the main slope and back of it, which also came down and started a large flame which was fed by coal falling from the roofs and ribs, soon after which the fire department saw the miners there were working on the inside of the fire so that the smoke was carried towards them. One precaution was taken, was to have the miners at the extreme end of the entry, had finished his day's work. While returning toward the main slope on his way to the surface, he was met by a man traveling towards him with the air current. Seeing that it was impossible to face the smoke he retreated with the air current and he was met by a

An additional tragedy followed the fire. Thomas Simpson, who was with his young son, James, came to Diamondville from a barn about six weeks ago, bringing with him a young son, James, the health of climate would have been a change. The shock of last night's tragedy was too great for Mrs. Simpson, and she died last night.

Thus every member of the family was a victim of the disaster. There are many other distressing incidents being reported from this mine.

The origin of the fire has not yet definitely determined, but it is thought that one of the candles was the one in the driver's lamp, which was on the sixth level. At this point the driver congregated while waiting for the cars to be loaded. The light was left to smolder, among the rubbish. The fire was discovered by Dr. James Hudson, and he states that he saw the fire in the driver's lamp. An English speaking, the death list may have been much lower, for he gave an alarm thoroughly and was very successful in communicating the danger to the unfortunate. He was himself rescued after great difficulty and is now under the doctor's care.

smoke and called to all the miners in that district to flee as there was a fire in the main level of the mine. The miners failed to act upon this warning and were suffocated."

Thirty-two lives are lost, of which three are Americans. It is given out by Superintendent Thomas Sneddon and confirmed by others familiar with the mine.

And his son and Dwyer" to respond to this summons is accounted for by the fact that he was too far distant to hear Hudson's voice.

Shortly after the breaking out of the fire Superintendent Sneddon arrived. An examination proved to him there was possibility of a single soul being left in the heavy flames and gas generated

men were certainly extinguished within three minutes of the fire gaining the level.

At this writing, 6 o'clock, the fire is still burning, but distinguishable; at any rate, it is fully under control. The persistent Sneedon announces that the fire will be out tomorrow for the recovery of the bodies.

Chaisty preparations are now under way to close the mine and the blacksmith shop having been prepared to close the mine.

but without avail, and when the uselessness of saving any lives became apparent, the fire was allowed to burn orders to close the level. This done at once, with the result that the fire was extinguished, and every opening being hermetically sealed.

The prompt action of Superintendent Sneedon in closing the mine and the blacksmith shop, and in promptly extinguishing it, has prevented the

CUBAN RELATIONS WITH THE UNITED STATES

was brought about. The work of hunting over the reins of government to the benefit of the people was a task involving much time and labor, and a large amount of study and experience on the part of Cubans in the work of the government. The officials of the element in control of the municipalities was not working in the interest of the island. The officials were inexperienced and they were given complete free hand. It would mean the destruction and ruination of the island.

Gen. Wood said the greatest difficulty was that there was no conservative element interested in the municipal government. His purpose was to bring the best element to the front.

After the discussion of several minutes the convention adopted one article defining the proposed relations, namely that Cuba would not make treaties with any other country, nor surrender the sovereignty of the republic, nor allow the island to be made a base for operations against the United States, nor any other country, nor for war purposes by any other country. This was added after a warm debate. The advocates of this clause maintained that Cuba should remain neutral as a result of the war, and that the result would be in the ruin of its agricultural interests which had already suffered greatly and had not yet fully recovered.

RELATIONS WITH CUBA

An Important Proposed Amendment to Army Appropriation Bill

CONSIDERED BY COMMITTEE

Proposition Prepared By Republicans But Minority Members Accept the

General Lines.

Washington, Feb. 23.—The senate committee on relations with Cuba met today to consider a proposed amendment to the army appropriation bill providing for the disposition of Cuban affairs. The proposition was prepared by the Republican members of the committee and is said to be satisfactory to most of them.

The propositions embodied in the proposed amendment include the following points:

That the United States shall have supervision of all treaties with foreign countries made by the republic of Cuba.

That Cuba shall not undertake to pay the debt incurred by Spain in her war with Mexico.

Upon these general lines. They insist, however, upon many verbal amendments.

Another meeting will likely be held on Monday. The members on both sides of the committee expressed the hope that an agreement would be reached by the end of the proceedings, but did not go far enough to render it certain that this result would be attained.

The important point to which the committee is giving especial attention is the right of Cuba to the island of Pines. There is some disposition among the Cubans to hold on to that island while there is apparently no disposition on the part of the United States to release that plantation.

There is also more or less contention over the exact meaning of the

with Cuba prior to or after the intervention of the United States.

That Cuba shall agree either to lease or sell to the United States such coaling or naval stations as, in the opinion of the president of the United States, may be necessary to the protection of the interests of this country.

That the United States shall have sufficient supervision of the laws of Cuba relating to sanitation to protect this country from epidemics liable to originate there.

It is understood that a draft of the resolution containing the provisions was submitted to the president and secretary of war and that they expressed approval of them. The minority members of the committee expressed themselves willing to come to an understanding

word "pacification" as used in the Teller resolution. That resolution provided that the United States forces should be removed from the island when it should become "pacified." The contention is that this is a word that may be broadly interpreted and may permit the United States troops to remain for a long period of time. Apparently all the members of the committee unite in the opinion that there would be no possibility of withdrawing the American forces until after the election and installation of Cuban officials under the new constitution.

There will be an effort to report the amendments Monday or Tuesday, as there is a general desire to have it become a part of the army appropriation bill.

CROWE LOCATED

It Is Said He Is In A Stronghold on

Bellevue Island Near Omaha Prepared for Resistance.

Kansas City, Feb. 25.—A special to the Times from Omaha late tonight says:

Pat Crowe is in hiding near Bellevue, at the edge of the dome of the court house at Omaha. The much-wanted alleged kidnapper of Eddie Cudahy is guarded and is defying the authorities of Omaha. The vicinity in which Bellevue town is situated.

Such is the statement of a prominent police official, who admitted tonight that he had been when looking for a raid on the place with the co-operation of the sheriff of Sarpy county.

It is stated by the same authority that recent knowledge has come to the police that Crowe is in the place. The alleged kidnapper to a practical certainty and that his letter written to Mr. Cudahy a week ago and dated South Omaha was never delivered.

water thrown on his search would not deter him from prosecuting his work in the direction indicated by his informant.

It is certain tonight that Chief Donahue has ordered the best men in which Crowe is guarded and that he has information that Crowe has five companions with him, all armed to the teeth, and that the place is so well guarded as to be made upon his stronghold. Stronghold it is, in every sense of the word, for the place is that which furnished the motor for the McCarty community from across the river, which that desperado made after committing numerous crimes.

The haunt of the Cudahy kidnaper, and the haunt of Vic McCarty, is on Bellevue Island, the most inaccessible and impenetrable wilderness known to exist in this portion of the country. Its

act location.

It has been supposed for a week past that Crowe was in hiding somewhere near Des Moines. Crowe's whereabouts and his hair has been kept as closely guarded that direct information was unobtainable. Through information obtained tonight it is learned that the Phikeland representative have been working in the vicinity of Avery and that Friday night one of their men was looking for information below Albricht. The two way stations on the road to Bellevue.

A week ago Chief of Police Donahue

The Omaha police cautious, for they realize that an attempt to take Crowe means a battle of no mean proportions. The police are not going to let Crowe get away. They are going to get Sheriff Sam Starter, of Sarpy county, to organize a posse to work from his end of the line.

Starter is known all over this section as a successful business man and he was the only man of all the hundreds who sought Vio McCarty, who dared, single handed, to enter the veritable canyon which precipitated the "Cattle" case. Crowe is the desperado of the "Cattle" case, but Starter's reputation was enhanced by his

admitted that he had received information that Crowe was hiding at the residence of friends, where he was being guarded night and day and that he had been told it was useless to try to discover the location of this house, but Chief Donahue then stated that the cold

bravery.

MRS. NATION THREATENS TO SUE FOR DAMAGES

Topeka, Kas., Feb. 23.—Mrs. Carrie Nation threatens to sue Shawnee county for damages for keeping her in jail in Topeka. Mrs. Nation says: "If I am not released immediately I will sue. The public knows the officers of the law know I am confined illegally. Personally, I prefer to stay in jail. I need rest. I desire quiet for a little while. It is pleasant where I am. But I will not permit that the county shall

Several persons, among them her brother, offered to provide bail, but this Mrs. Nation refused.

"If they release me within a day or two I will not sue. If I will be all right. Otherwise there will be a suit and a big one, too. I have broken no law, and they have no right to keep me here. I will have a chance some day to make that point plain and will do so."

confinement in jail on a charge of violating the law. I shall sue the county for heavy damages. On February 26 I am billed for a lecture and about the same time I am to edit a paper in Peoria, Ill. For the money that has been promised me for these services I shall sue the county."

"What do I want to get out for?" Well, that's a funny question. I want to get out so I can do the work the Lord has given me. I expect to accomplish much good among the negroes by my new publication and I cannot do the work satisfactorily while penned up in this place."

ALLEGED CONFESSION OF CAPTAIN OLIVER DOLSON

Holenn. Modt. Feb. 23.—The mystery released in December last had developed

surrounding the death of Captain Oliver Dolson, one of the men who laid out the city of Denver, and was a famous Black Hills character, whose dead body was found in his cabin in Washington Gulch, thirty-five miles west of Helena, remains unsolved, and the tragedy promises to develop one of the most remarkable stories of the new west.

The officers who returned today from Washington Gulch report the finding of and alleged confession signed by Captain Dolson in which he declares that his son, Oliver Dolson, and Elias Feringler, the latter a youth from Missouri, are innocent of the murder of Eugene Cullinan which occurred in the latter part of 1905, in which the younger Dolson is now serving a life sentence and the other two ten year terms in the penitentiary.

While in the confession, and he made the confession in the hope of freeing innocent men.

The officers believe the confession to be a forgery, but in the meantime prove this until persons from Denver with Dolson's handwriting, can be found.

To all appearance Dolson had committed suicide, and the officers were surprised against the wall and Dolson was apparently stood in front of it and pulled the trigger with a string. He was shot through the heart.

Some time ago the warden of the penitentiary learned that a convict who was

that he would kill Dolson and that he would leave on the body a confession purporting to exonerate the three men in the Dolson case. He had the confession promised to deliver \$15,000 which he claimed to have buried somewhere in Wyoming with the convict if he would kill his father. It was his hope that the confession was seen near Washington Gulch last Sunday and cannot now be found.

The alleged confession of Dolson implicated Edward Cullinan in the murder of Cullinan. Cullinan is now in the penitentiary commiserator at Pierre, S. D. He was a friend of the younger Dolson and spent money in defending all three of the convicted men.

A MYSTERIOUS CASE.

Chicago, Feb. 28.—Facts concerning the larceny of \$50,000 for the "grand robbery" indicted by the grand jury Wednesday, which included the mystery. States Attorney Clinegan and the complainant's son, K. C. Barton, will appear in the case. A new complaint was drawn up by the States Attorney Barnes this afternoon against Lank Salisbury. This is the first of the city attorney at Grand Rapids. It is believed that the complaint was prepared because the name in the indictment is "Salisbury," which is wrong and renders the indictment invalid.

Mr. Dineen would not deny or affirm the statement that the grand jury will be asked to vote on the new true bill of indictment.

Have Tourist Season

The Colorado and Southern will put out "Pictureque Colorado" again this year and the Rock Island will do theirs to bring eastern trade this way than it has ever yet done.

The largest excursion now known to be coming to Colorado Springs this year will be that of the Epworth Leaguers, who will meet this summer in San Francisco. Arrangements have been made with the railway companies whereby holders of these Epworth Leaguers' tickets can stop off at Colorado Springs either east bound or west bound both ways. The concession of this privilege by the traffic association means the presence in Colorado Springs

The encampment of the Grand Army will benefit Colorado Springs regardless of where it may be held. If it comes to Colorado Springs, possibly may, then the city will be benefited in many ways, which she always derives from general Colorado business. If it meets in Cleveland, as it is generally believed it will do, then it will benefit Colorado because the railroad rates will feel that they have been slightly lowered, and they will leave nothing undone to turn general business away from Cleveland and to direct it to the Rocky mountains.

completion of many residences in the
city will make Colorado Springs better
prepared than ever before to care for
the visitors.

Who Col. Mosby

In a recent interview in Denver the
colonel spoke in very high terms of the
doctor. When asked about the report
that Baron Von Massow had been killed

"All I know about the matter is what I see in the papers," he said. "You see, Jim was a young officer in the Prusadan army and, as he was a professional soldier and wanted to see a good deal of war, he came over here in '62 and joined the California Guard. Well, he got shot in the chest and sent back with the California Cavalry and had to go back home, but he's always remembered us and sent us letters from time to time.

"Several months ago Ben Palmer got a letter from him asking him whether I was alive yet or not, and telling him to

"I've been intending to write, but I thought I'd wait until I got back to Virginia among our old friends and in scenes familiar to us both, but now that here's talk of his having left us money have some delinquency in doing it."

"I feel sometimes as if I would enjoy, one of our old riffs, but of course, a soldier can't help but feel that way sometimes, although, as a principle, I'm opposed to war, and would have very much liked to see the Spanish-American war averted. It seems to me that no humane man can really like to see a war come upon a country. It means entirely

There is no doubt that Governor Roosevelt has greatly strengthened the good opinion the people of Colorado have of him by his recent hunting trip. The people of the west love a strong, manly man without fuss or feathers, and Roosevelt has shown himself that kind of a man. He came and went as quietly as possible, roughed it with the hardiest frontiersmen, endured all the inconveniences and dangers without a murmur, enjoying the rough sport eagerly. He showed that he really loves the life and the people of the west, and in return they admire and love him.

list was the ridiculous and sensational stories sent out by fake newspaper men a hundred miles from camp, and he was more annoyed and mortified by these than any one else. Should he ever leave the presidency, which is not improbable, the far west would have the best friend who has ever occupied that position, and one who knows more about the resources and the needs of this section and would do more to favor them than any of his predecessors.—Boulder News.

ives a Letter From Girl's Brother.

ter to Mr. Klemm, also the newspaper. We had not heard anything from our sister Emma since the time of her disappearance. I have written to my brother and two sisters but have not received answer yet, but I know they have not heard from her. I do not know what to say about the finding of the skeleton. It seems to me very likely to be that of our poor sister. Please let us know if any more have been found and how much.

Yours respectfully,
J. O. Tornblad.

Bloomington, Ill.

Mr. Law has been unable to investigate the matter of the finding of the bones because of the snow in the canon, but as soon as it melts he will go out and see if there are any other indications of the suicide. He will write Mr. Tornblad to that effect and if he learns of anything more he will let his brother know. The coroner has the bones already found in his possession and will hold them until he has thoroughly investigated the case.

The indications for summer tourist business for Colorado Springs are the best that have ever been noted at this time. The chamber of commerce has received a great many letters of late indicating that people are considering Colorado Springs for their summer homes. He has been sending out increased quantities of printed matter in response to many inquiries and believes that the city is becoming known as a place of temporary or permanent residence than ever before. One of the interesting results that has been obtained from the chamber of commerce correspondents is that inquiries generally mean temporary residents and temporary residents generally mean permanent residents.

Secretary H. H. Axtell was asked to revise the "Colorado Summer," a booklet issued by the Atchison, Topeka and Santa Fe Railway company, this booklet being the first of the kind. It contains a mass of railroad advertising that has been put before the public for many years. The secretary is at work on the literature of the city and the state and it will be out before many weeks.

The other railroads also are preparing to advertise Colorado this year more than ever before. The Santa Fe, the Denver and Rio Grande has placed an order for 10,000 copies of its little work "Beautiful Colorado," this entire order being placed from the Pan-American exposition at Buffalo this summer.

The Colorado and Southern will put out "Picturesque Colorado" again this year and the Rock Island will do more to make this way than it has ever yet done.

The largest excursion now known to be coming to Colorado Springs this year will be that of the Epworth Leaguers, who will make a tour of the San Francisco. Arrangements have been made with the railway companies to give the holders of these Epworth Leaguers' tickets off at Colorado Springs either east bound or west bound or both. The concession of this privilege by the traffic association means that the Epworth Leaguers can go anywhere from a day to ten days of many thousands of visitors.

The encumbrance of the Grand Army will be removed regardless of where it may be held. If it is to Denver, as it possibly may, then Colorado Springs will derive the benefit of the business that will come from general Colorado business. If it comes to this land, as it is generally believed it will do, then it will benefit Colorado because the western railroads will feel that they have a chance to make money and they will leave nothing undone to turn general business away from the Rocky mountains and to direct it to Colorado.

The completion of the Antlers and the completion of many residences in the city will make Colorado Springs better prepared than ever before to care for the visitors.

Everybody has heard of the famous battalion which served the Confederate States of America during the civil war under the command of Colonel J. B. Mosby.

This battalion did some of the fiercest fighting in the civil war, and is famous for its many commands which were successful in carrying out the great strategic plan of the command.

Many of these commands are living at the present time, and the eastern papers which has been published in the eastern papers lately is true all of the survivors of the civil war, many of them have passed.

The story in question is the reported death of Baron Von Masowsky, who was a member of Mosby's command, and is to the effect that the Baron's command was killed about 1860, many of the remaining members of the command.

Judge J. D. Shewalter of this city was a member of Mosby's battalion and was a member of the command of Baron Von Masowsky. He said in regard to it that he had not received any authentic information concerning the matter.

"What I know concerning the matter is that I have read in the eastern papers recently," said Judge Shewalter to a Gazette man yesterday. "I have seen several notices in eastern papers but paid no particular attention to them until recently when I received a letter from Captain Wiley W. Early, nephew of General Early, about the matter. Captain Early forwarded me a clipping from the St. Louis paper to the effect that the Baron Von Masowsky, a colonel in the German army, who during our civil war was attached to Colonel Mosby's com-

There is no doubt that Governor Roosevelt has greatly strengthened the position of the people of Colorado by his recent hunting trip. The people of the west love a strong, manly man, without fuss or feathers, who has the heart of a lion and the kind of a man. He came and went as quietly as possible, roughed it with the hardiest frontiersmen, endured all the hardships of the wilderness, was a humorist, enjoying the rough sport hugely. He showed that he really loves the life and the people of the west and that he is a true sportsman.

The only unpleasant feature of the visit was the ridiculous and sensational story sent out by feeble newspaper men and editors, who have no sense and are more annoyed and mortified by these than any one else. Should he ever reach the presidency, which is not impossible, he is far from being the best friend who has ever occupied that position, and one who knows more about the resources and the needs of the west than any man of his position whom I have known.

MINING REVIEW OF THE WEEK

Details of the Various Mining Transactions Which Have Taken Place and News of Strikes and Shipments at Camp.

DEVELOPMENT NEWS

Below will be found particulars of development work lately undertaken in the district by companies and lessees.

Elkton.
The two shafts were received at the Elkton Wednesday and attached to the bottom of the cages, as had been planned. Work was received in this city in the afternoon by one of the directors of the company that a vein had been made, and that the method of hoisting the water to the surface had proved entirely satisfactory, and that the cages would continue to bring up the loaded tanks until the eighth level pump was recovered. It was thought that it would take between two and three days to accomplish this task. There has been a great deal of discussion in local mining circles as to whether a dead or live water course would be better. The opinion of the company is that the course is a live one, and that even in that event the water would stop when it reached a certain level in the shaft. The few hours' work with the tanks, however, will likely settle this question. If the course is a live one the water would come in from the bottom of the shaft, and the present level would be maintained; while if not, the tanks will sink to the bottom very quickly. President George B. Jones spent the day Wednesday in camp observing the success of tank method of unwatering.

Kentucky Belle.
The Bonanza Leasing company, operating on the Kentucky Belle property, on Raven Hill, have completed their north shaft to the 200-foot point, and also have it all timbered up so that drifting can be done at once for the shoot of ore which was opened above. The ore showed some very good values, and the lessees hope to begin shipments within a reasonable time. From the south shaft drifting is progressing on the Moose vein in both directions, but no pay ore has been opened up.

Victor.
R. Heath and E. F. Conant have been granted a lease on the main dump of the Victor mine. The Victor mine is a washing machine this week to handle the waste from the shaft, which is being sunk at a rapid rate on a good vein. Mr. Conant is now operating the Santa Rita lease on Squaw mountain.

German-American.
The work of sinking a mine from the tunnel level in the Puzos claim of the German-American company, which has been commenced. The property is being worked on company account, and some good ore has already been obtained. The company is operating the tunnel through which operations are being conducted.

Columbia.
John Barlett, the Columbia lessee, has let a contract for the sinking of the shaft in the Hooper Boy tunnel. This drifting will take the tunnel into Little Mary territory on Beacon hill, in which ground the tunnel is being sunk. Right, John Kellogg & Co. have the contract and will commence the work at once.

E. Porter Gold King.
The shaft of the E. Porter Gold King on Gold Hill, which is being put down to the 800-foot depth under contract, has reached the 785-foot point with no particular new development. The lessees in the upper levels are maintaining a steady production although no ore is being shipped at present, by the company.

Rittenhouse.
The main shaft of the Rittenhouse company's property on Gold Hill is down to the 300-foot point, and the operators are ready to commence drifting on the producing vein at this point. The shaft has followed the vein down from the 125-foot level where several good values have been obtained. The ore at this depth was of excellent shipping grade, and the company expects even better results at the 250-foot depth. Negotiations are now being made of the property to Michigan parties, and a big option is understood to have been already paid. The company is at present controlled by the Pettit, Philadelphia, and his son W. B. Pettit. Steady development work has been carried on for the past year. The property was acquired from the Alamo company about a year ago, and it consists of a little over 11 acres.

Little Nell.
The recent discovery which has been made in a mine at 100 feet of drifting level on the Harcourt block of the Little Nell company has resulted in a determination to sink an entirely new shaft to more easily develop the property, and this mine is now being pushed down. The shaft will be put down immediately over the mine, so as to make one shaft down to the bottom of the mine. Meanwhile the mine is being pushed down, and the high-grade ore discovered a little over a week ago is holding out very well. The mine is now all the way from \$20 to \$300 in gold, and the mine is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

Omega.
A good three-foot vein has been opened on the Omega property on Gold Hill by Carl and his partner. In crosscutting from the old tunnel, the vein was encountered and a small amount of drifting has revealed a large amount of ore. The mine is being pushed down, and the high-grade ore discovered a little over a week ago is holding out very well. The mine is now all the way from \$20 to \$300 in gold, and the mine is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

Arvilla.
The Arvilla company, owning 88 acres of ground adjoining the Victor mine, is crosscutting from the old tunnel, the vein was encountered and a small amount of drifting has revealed a large amount of ore. The mine is being pushed down, and the high-grade ore discovered a little over a week ago is holding out very well. The mine is now all the way from \$20 to \$300 in gold, and the mine is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

Mary Nevins.
Drifting is still in progress on the Mary Nevins property, and although the lessees have encountered no ore of a shipping value, they are going to drift for the entire distance of the vein to the bottom of the level. The shaft is being run some distance below this depth, and but little work has been required to get to the vein 100 feet below the present workings. There has been a great deal of discussion in local mining circles as to whether a dead or live water course would be better. The opinion of the company is that the course is a live one, and that even in that event the water would stop when it reached a certain level in the shaft. The few hours' work with the tanks, however, will likely settle this question. If the course is a live one the water would come in from the bottom of the shaft, and the present level would be maintained; while if not, the tanks will sink to the bottom very quickly.

Transvaal.
The Transvaal property, on the crest of Galena hill, has one of the most favorable showings in that part of the camp. The shaft is now down about 50 feet on a contact between granite and a vein of quartz carries pay values. The work is being pushed, however, without any attempt to prospect the vein at the present depth, and the shaft will probably be put down 100 feet before any extensive work is started. The shaft is being run some distance below this depth, and but little work has been required to get to the vein 100 feet below the present workings. There has been a great deal of discussion in local mining circles as to whether a dead or live water course would be better. The opinion of the company is that the course is a live one, and that even in that event the water would stop when it reached a certain level in the shaft. The few hours' work with the tanks, however, will likely settle this question. If the course is a live one the water would come in from the bottom of the shaft, and the present level would be maintained; while if not, the tanks will sink to the bottom very quickly.

Golden Cycle.
The Golden Cycle mine is making a good production at present of a very rich grade of ore. The mine is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

Golden Cycle.

being painted red, the upper half white and the portion going down into the ground black to preserve the same. The white portion is numbered, lettered and named, so that a person can readily tell what comes of the property. These conspicuous measures can be seen at a long distance. One trouble in Cripple Creek is that, on account of the claims conflicting, there are very few companies which have their boundaries designated as located or surveyed; in fact, most of the owners of ground cannot tell where their exact boundaries are. The present parties who have the lease and hold on the Arvilla desired the boundaries established, so they could be ready understood. Surveys have also been made to develop the property in a regular system, so that the Arvilla levels will come the same as the Victor, adjoining, the workings of which have been connected with the Arvilla. It will also connect with the workings of the Victor, which have also entered the Arvilla ground at one or more places. The present bond on the Arvilla property requires a large expenditure in development and a payment to the Arvilla company of \$750,000, if paid for the first year, \$1,000,000 if paid for the second year, and \$1,250,000 if paid for the third year, and to keep the lessees have to do a large amount of permanent and systematic development work.

White City.
The lessees on the White City property on the north side of the creek, which is being run to a large phosphate level, and from the present vein level, before the mine is opened, are estimated, and returned \$50 in gold to the ton. The ore body recently opened up has now been surveyed, and its apex determined. The ore is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

the extent of the enormous ore body. A raise has been made on the ore for about 12 feet and samples from the ore house indicate values of about \$80 to the ton, a shipment of 15 tons is about ready to start.

SHIPMENT NEWS
Some of the many shipments sent out during the past week will be found recorded in the items below.

Elkton.
The Elkton mine has been maintaining an excellent output from the sixth level in spite of the fact that the water is up to the 650-foot point in the shaft. At a point near where the slope from the sixth level crosses the fifth, the fifth streak of very high grade ore is being followed, although the average grade of shipment is toned down to about 100 tons in gold to the ton. The mine is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.

Elkton.
The Elkton mine has been maintaining an excellent output from the sixth level in spite of the fact that the water is up to the 650-foot point in the shaft. At a point near where the slope from the sixth level crosses the fifth, the fifth streak of very high grade ore is being followed, although the average grade of shipment is toned down to about 100 tons in gold to the ton. The mine is being worked at this grade has now been saved for shipment. When the new shaft is down it will be equipped with a new and modern plant of machinery, and the mine will be aggressively worked.
